Art Unit: 2653

1. Acknowledgment is made of applicant's claim for foreign priority under 35

U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 10/007655, filed on 12/10/01.

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground: provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-3 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 14-20 of U.S. Patent No. 6772429. Although the conflicting claims are not identical, they are not patentably distinct from each other because the limitations set forth in the instant application (i.e. a multi-layer optical recording medium with user data areas on each recording layer; grooves formed on the user data areas; user data wobbles formed on at least one lateral surface of each groove of one of the recording layers; and lead out wobbles, which differ from the user data wobbles of the one recording layer, formed in an area beyond a predetermined radius of the one recording layer wherein the wobbles of the lead-out area of the one recording layer are formed by modulating at least one feature of frequency, period, amplitude and phase of the wobbles of the user data area of the one recording layer) correspond to the claimed subject in the '429 patent set forth in the claims, col. 8, lines 26-30 and 35-43.

Art Unit: 2653

4. Claims 1-3 would be allowable upon filing of a proper terminal disclaimer obviating the double patenting rejection set forth, *supra*.
